TECHNICAL SKILLS

Programming: Python, SQL, JavaScript, TypeScript

AI Engineering: LLMs, RAG, AI Agents, LangGraph, LangChain, MCP, Prompt Engineering, Embeddings, Vector Databases, Tool Calling

Backend & Frontend: FastAPI, REST APIs, API Integration, Node.js, PostgreSQL, MongoDB, React.js, Vite, HTML5, CSS3

Cloud & Data: AWS, Databricks, Snowflake, Docker, Apache Airflow, dbt

Machine Learning: NLP, Scikit-learn, PyTorch, TensorFlow, Supervised Learning

Analytics: Tableau, Power BI, Mixpanel, Excel, A/B Testing, Matplotlib

Tools & Methodologies: Git, GitHub, VS Code, Jupyter Notebook, Jira, Confluence, Figma, Agile/Scrum, SDLC, CI/CD Pipelines

EXPERIENCE

Senior Product Engineer

May 2023 – May 2024

FitFlix Private Limited

- Developed NLP pipelines to process 100K+ customer reviews and support conversations, using sentiment analysis, entity extraction, and semantic search to uncover actionable product insights.
- Designed and developed REST APIs using FastAPI and PostgreSQL to power customer feedback workflows and product intelligence features.
- Built and shipped 15+ customer-facing and internal features, implementing backend business logic, database integrations, and production-ready services across multiple product releases.
- Mentored junior engineers and product teams on NLP workflows, API integration, and backend development practices, accelerating onboarding and strengthening cross-functional technical collaboration.

Product Analyst

May 2022 – Apr 2023

BlackBuck (Zinka Logistics Solutions Private Limited)

- Owned the technical delivery of 10+ product features for the BlackBuck Transport Android application by translating business requirements into PRDs, user stories, wireframes, engineering specifications, and production-ready releases.
- Built a product instrumentation framework by defining 50+ application events, leveraging Mixpanel, SQL, and Metabase to measure user behavior, optimize feature adoption, and support data-driven product decisions.
- Developed Python and SQL solutions to automate product validation, operational reporting, and feature performance analysis, reducing manual effort by 30% and accelerating engineering feedback cycles.
- Accelerated feature releases by driving sprint planning, API validation, SIT, and UAT, ensuring production-ready software across Agile development cycles.

Product Analyst

Nov 2020 – Apr 2022

MediBuddy (Phasorz Technologies Private Limited)

- Increased product visibility across 20+ core KPIs by building interactive Apache Superset dashboards, enabling product managers to monitor feature adoption, user engagement, and operational performance in real time.
- Improved product catalog quality by standardizing and validating 150K+ healthcare SKUs using SQL-driven workflows, reducing data inconsistencies and creating a more reliable search and browsing experience.
- Influenced roadmap decisions by analyzing 1M+ user interactions across conversion funnels and customer journeys, identifying high-friction touchpoints that shaped feature enhancements and onboarding improvements.
- Enabled faster product iterations by automating recurring SQL reporting and performance tracking, reducing analysis turnaround time by 35%.

Senior Engineer

Jul 2019 – Nov 2020

Larsen and Toubro Limited

- Built Tableau dashboards and SQL reporting solutions for 1,000+ inventory items, improving inventory visibility across large-scale infrastructure projects.
- Reduced planning delays by 40% by automating reporting workflows and streamlining inventory tracking through SAP ERP.
- Developed Excel reports using Pivot Tables and LOOKUP functions to support inventory tracking and procurement planning.

PROJECTS

CareSync AI | AI-powered healthcare scheduling and clinical intelligence platform

Feb 2026 – May 2026

- Developed a full-stack healthcare platform with role-based workspaces for patients and doctors using FastAPI, React and PostgreSQL.
- Built Gemini-powered AI services for symptom triaging, clinical note summarization, and patient support automation.
- Developed a Random Forest machine learning pipeline to predict appointment no-show risk using patient, scheduling, and specialty data.
- Created interactive analytics dashboards for admins to monitor appointment utilization, wait times, no-show trends, and operational KPIs.

InboxIQ | *Multi-Agent RAG-Based Email Intelligence platform*

Dec 2025 – Jan 2026

- Built a multi-agent email automation system using LangChain, LangGraph and Gemini to automate email triaging and response generation.
- Developed RAG pipelines using vector embeddings and semantic retrieval to ground LLM responses in historical communications and organizational knowledge.
- Integrated Gmail APIs to support automated email ingestion, categorization, quality assessment, and outbound response workflows.
- Implemented modular AI agents and evaluation pipelines to improve response accuracy, reduce hallucinations, and ensure consistency.

SeatRush | *Event Ticketing and Payment Orchestration platform*

Aug 2025 – Nov 2025

- Developed a full-stack event ticketing platform using TypeScript, React, and Vite, with Claude Code, enabling users to browse events, select tickets, purchase add-ons, complete checkout, and receive digital event passes.
- Integrated 10+ Hyperswitch APIs to support payment authorization, manual capture, cancellation, refunds, payment-method management, and real-time transaction tracking.
- Built and tested 15+ payment scenarios, including successful payments, declined transactions, and refunds using sandbox connectors.
- Created a modular payment workflow with secure server-side API handling, protecting credentials and maintaining traceability.

Telecom Customer Churn Prediction | *ML-powered customer retention analytics platform*

May 2025 – Jul 2025

- Built a predictive analytics solution using Random Forest models to identify at-risk customers for a telecom business with 95% accuracy.
- Analyzed customer behavior, billing, and service interaction data to identify key drivers of churn, including payment delays, support calls, and contract duration.
- Built a Streamlit-based decision support tool enabling stakeholders to assess churn risk and prioritize retention efforts in real time.

EDUCATION

University of South Florida

Aug 2024 – May 2026

Master of Science (M.S.), Artificial Intelligence and Business Analytics
GPA: 3.97/4.00

National Institute of Technology Calicut

Jul 2014 – May 2019

Bachelor of Technology (B.Tech.)

CERTIFICATIONS

Databricks Data Engineer Professional 

Azure Databricks Architect
